## DETAILED ACTION

### *Title*

1. The new title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

### *Claim Objections*

2. Claims 1-2 and 5-26 are objected to because of the holding portion has been described in the claims as being different from a coil or wire filament although the specification does describe that the holding filament is a coil filament. Please clarify.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claim 4 is rejected under 35 U.S.C. 102(b) as being anticipated by Suzuki. The fixing device by Suzuki comprises a heating roller brought into pressure contact with a pressurizing roller, thereby fixing an unfixed developer, the heating roller including: a first heater for heating a central region of the heating roller; and a second heater for heating a side end region of the

heating roller on an outside of the central region, wherein a peak of heat distribution of the first heater overlaps the second heater's (figure 2).

6. Claims 1-2 and 5-26 are allowed.

***Response to Arguments***

7. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.
